

SAMPLE MEDICAL REPORT — PRIOR AUTHORIZATION

DEMO DOCUMENT — NOT A REAL PATIENT RECORD

Patient ID: SYN-P001

Patient: Alex Kumar (fictional)

Age: 46 years

Sex: Male

Date of Visit: 13 August 2026

Clinical Complaint

Patient presents with persistent lower back pain radiating to the left leg for approximately 10 weeks. Pain is reported as severe and has progressively affected walking and daily activities.

Clinical History

The patient completed 8 weeks of supervised physical therapy and used prescribed analgesic medication. Symptoms have not improved significantly despite conservative treatment. No previous lumbar MRI is documented within the available records.

Examination / Findings

Physical examination documents restricted lumbar movement and persistent left-leg radiating pain. Neurological examination notes reduced sensation in the left lower extremity. The treating clinician documents concern for possible lumbar nerve-root involvement.

Requested Service

Requested procedure	MRI Lumbar Spine
Procedure code	72148 (example/demo code)
Clinical reason	Persistent low-back pain with radiating symptoms despite conservative treatment
Urgency	Routine

Previous Treatment

- Physical therapy: 8 weeks
- Conservative medication management: completed
- Treatment response: inadequate improvement

Supporting Documentation

- Treating physician order: PRESENT
- Clinical examination: PRESENT
- Previous treatment history: PRESENT
- Relevant clinical findings: PRESENT
- Previous lumbar MRI: NOT DOCUMENTED

Medical Necessity Statement

Based on the documented persistent symptoms, radiating pain, abnormal sensory findings, and failure of conservative treatment, the treating clinician requests MRI of the lumbar spine for further evaluation of the suspected underlying spinal/nerve-root condition.

Coverage Information — DEMO ONLY

Coverage status: ACTIVE (synthetic)

Procedure coverage: YES (synthetic)

Prior authorization required: YES (synthetic)

Provider

Specialty: Orthopedics / Spine Medicine

Provider ID: SYN-PR-1023

Expected system behavior: Extract the diagnosis, symptoms, duration, previous treatment, treatment response, requested MRI, physician order, supporting evidence, and coverage information. Then check the applicable documented rules and send validated features to the ML model for an authorization recommendation.
